

# ONE4ALL PROJECT

## WHAT NEWS FOR ONE4ALL PROJECT?

---

### **Successful inaugural meeting on Intellectual Property Rights and Replicability marks a Milestone for ONE4ALL Consortium**

The ONE4ALL partnership reached a significant moment on Monday, 13th November, as it conducted its first Intellectual Property Rights (IPR) workshop and convened a meeting to discuss the replicability of project results.

This dual event showcased the consortium's commitment to safeguarding its partners' backgrounds, protecting project outcomes, and fostering a collaborative strategy for future endeavors.

The opening segment featured an insightful presentation by [EXELISIS](#), emphasizing the significance of partner backgrounds and the protection of project results. Through illustrative examples drawn from the ONE4ALL project, participants gained a comprehensive understanding of Intellectual Property Rights, laying the foundation for a robust framework to safeguard the consortium's innovations.

The second part of the event delved into the concept of replicability for project results. A constructive discussion ensued, resulting in the formulation of a clear and common strategy to guide the consortium in replicating and disseminating successful outcomes from the ONE4ALL project.

### **The genesis of AMiMO Cluster**

The sister projects of the Horizon Europe call HORIZON-CL4-2022-TWIN-TRANSITION-01-03 joined to form a new cluster, called AMiMO (Automated Manufacturing with Intelligent Modules).

On 11<sup>th</sup> October 2023, ONE4ALL, [MARS](#), [MODAPTO](#) and [MODUL4R](#) projects met and engaged in a productive brainstorming during which they identified the official name of the cluster, the future joint activities and a cluster roadmap covering the years until the completion of the four projects.

United by the common goal of exploring production system modularity for enhanced flexibility, these projects aim to leverage cyber-physical modules for cutting-edge advancements.

The synergistic collaboration among these research projects will expand their impact beyond individual schemes and contribute significantly to the dissemination and communication of cutting-edge scientific developments.

### SPS Fair in Nuremberg showcases ONE4ALL Project

[Automationware Srl](#), a key partner in the ONE4ALL consortium, seized the opportunity to showcase its latest innovation, the J-Actuator, in November 2023 at the Smart Production Solution (SPS) fair in Nuremberg. This event provided a platform to engage with visitors and stakeholders, offering insights into the incredible technology and diverse applications of the cobot in the market and in the ONE4ALL project.

Industry fairs serve as dynamic platforms for EU funded projects to transcend the confines of research and development, reaching a broader audience, improving visibility and networking, fostering knowledge dissemination and clear feedback from potential users.

The ONE4ALL consortium expresses its gratitude to the Synapticon team for facilitating this invaluable opportunity at the SPS fair.

### Want to know more about the project?
